

DON'T THINK YOUR EXISTING PICTURE LIGHTS ARE UP TO THE JOB ... THINK AGAIN!

The secret to great art lighting is to make sure all the key lighting factors are included in your picture light, and this is now possible every time. Whether you are looking to upgrade your existing picture light from halogen to LED or to buy one of our new picture lights, the technology used is now the same in each case.

You no longer need to accept poor coverage on your paintings, over illumination at the top (with damaging heat & UV) and little or no lighting further down, this can now be improved quickly & easily to give a uniform light across the whole canvas.

We currently have 6 new art light head styles available and can now offer the same lighting technology to any existing shape or size of picture light that you have.

It is so important to maximise the viewing experience and light the art correctly. To do this, the following points must be included in your lighting solution:

Colour Temperature

A warm white light (2,700K as standard)

Colour Rendering Index

A high CRI is required to bring out the rich colours, definition & brush strokes in the paintings.

Head Shape & Size

We can work with all shapes & styles of picture lights.
Both new & existing.

LED Lensing & Spacing

Various lensing & separations are available and will be selected depending on the picture light size in comparison to the canvas dimensions.

Arm requirements

Correctly sized arms will be calculated (elevation & projection), each with a swivel knuckle, to gain the desired head position and angle. It is important to shield the LED source so that no glare is observed when viewing the painting.

Lighting Levels

Each picture light will be supplied with its own dedicated dimmer to ensure correct levels are achieved across the canvas.

Head Finishes

Many colours and finishes are available such as classic old gold, brass, bronze, RAL specific colours, etc. With existing picture lights, a re-spray is available and makes all the difference if scratches are present.

Recently we were asked to work with the existing picture lights in the Long Gallery at Castle Howard and use our LED Upgrade Kit technology to transform the lighting for their art collection. The paintings ranged from small portraits (18" x 15") through to full portraits (110" x 70"). Great coverage was achieved on all paintings.

If you would like to discuss how this technology would transform an art collection, please do make contact.
